

Product Requirements Document (PRD)
Product: Offline Personal Budget Categorizer
Version: 1.0
Audience: Engineering, Design, QA

1) Purpose

Build a privacy-first, browser-only budget tool for creating training data, categorizing new statements, auditing outputs, and exporting standardized CSVs. All processing runs locally in the browser.

2) Goals

- 100% local/offline processing
- Standardize mixed bank/card CSVs
- Reach $\geq 90\%$ categorized rows in training flow
- Editable category review before export

3) Non-Goals (v1)

- PDF/OCR ingestion
- Bank APIs/sync
- Server-side ML

4) Core Flows

A. Create Training Data (one-time)

1. Upload statement CSVs
2. Auto-categorize via heuristics + learned rules
3. Show top 10 recurring uncategorized rows
4. User labels via dropdown (existing + Other + Misc)
5. Repeat until $\geq 90\%$ coverage or user stops
6. Review/edit categories in table and download final training CSV

B. Categorize

1. Upload training CSV + new statement CSVs
2. Apply per-file bank/person overrides
3. Auto-categorize and show top recurring uncategorized
4. User edits categories in output table dropdown
5. Download finalized categorized CSV

C. Chat Popup

- Minimizable right-side popup
- User/system message differentiation
- Preloaded action: Audit my expenses
- Offline analytics over loaded dataset only

5) Functional Requirements

- Tabs in header: Create training data, Categorize
- Canonical output columns: date, normalized_name, amount, category, bank, person
- Top uncategorized prompts include date, amount, file name
- Category dropdown supports Other + custom input + Misc

- Progress ring + remaining uncategorized badge
- Download buttons for reviewed training and categorized outputs

6) UX Requirements

- Professional but friendly visual style
- No long single-column overwhelming flow
- Clear one-time-training messaging
- Mobile-safe popup placement/minimize behavior

7) Security & Privacy

- No user data leaves browser
- No backend required
- No remote API calls for processing/categorization/chat

8) Acceptance Criteria

1. Two-tab header works
2. Create-training iterative loop functions
3. Top 10 uncategorized with context appears
4. Coverage ring and remaining badge update correctly
5. Editable category dropdown in training and categorize output tables
6. Final reviewed CSV download works
7. Chat popup with audit action works offline
